NEWS RELEASE

January 20, 2022

BITTERROOT RESOURCES PROVIDES UPDATES ON THE COYOTE SINTER AND CASTLE GOLD/SILVER PROJECTS

Bitterroot Resources Ltd. (*symbol BTT, TSX-V*) is providing an update on its precious metals exploration activities in the State of Nevada, which have been advancing in addition to the Company's magmatic nickel/copper drilling programs on the LM Property in the Upper Peninsula of Michigan.

The 100%-owned **Coyote Sinter** claims are located in Elko County, NV, at the south end of the Independence Trend and five miles southeast of the Tuscarora mining camp. In early 2021, Bitterroot's geophysical contractor Zonge International completed a CSAMT survey which identified a resistive brittle dacite layer at the most prospective 200-400 metres depth below the geochemically anomalous sinter horizon. The CSAMT also identified a sub-vertical resistive zone which is coincident with geothermal vents in the sinter horizon which were mapped in the summer of 2021. The Coyote Sinter property is located on Federal, BLM-administered lands. BLM has approved the Company's Notice and accepted bonding for up to 20 drill sites. Drilling of these resistive CSAMT targets and the mineralized "Chevron Fault" is planned for later in 2022, subject to financing and drill rig availability.

The 100%-owned **Castle** claims are located in Esmeralda County, NV, at the south end of the Gilbert district and 30 miles west of Tonopah, NV. Castle hosts a 1x2 kilometre, argillic-altered and geochemically anomalous hydrothermal system. Previous operators drilled extensive areas of low-grade (0.1-0.3 grams Au/tonne) mineralization in the altered tuffs. Castle is untested for bonanza-grade mineralization at depth, in potential hydrothermal feeder zones below the low-grade mineralized tuffs. Drilling is planned to test for Hishikari-type high-grade gold/silver mineralization at the intersection of sub-vertical gold-mineralized silicified veins and the unconformity between Ordovician Palmetto Formation metasediments and overlying brittle Castle Peak rhyolitic tuffs. The Castle property is located on Federal, BLM-administered lands. BLM has approved the Company's Notice and accepted bonding for up to 13 drill sites. Drilling is planned for later in 2022, subject to financing and drill rig availability.

Additional details on the Coyote Sinter and Castle gold/silver projects are available in slide presentations on the Company's website www.bitterrootresources.com.

FORWARD LOOKING STATEMENTS: Certain statements contained in this press release may constitute forward-looking statements under Canadian securities legislation. Generally, forward-looking information can be identified by the use of forward-looking terminology such as “expects” or “it is expected”, or variations of such words and phrases or statements that certain actions, events or results “will” occur. This document contains statements about expected or anticipated future events and/or financial results that are forward-looking in nature and as a result, are subject to certain risks and uncertainties, such as general economic, market and business conditions, regulatory processes and actions, technical issues, new legislation, competitive conditions, the uncertainties resulting from potential delays or changes in plans, the occurrence of unexpected events and the company’s ability to execute and implement its future plans. Actual events may differ materially from those projected in the forward-looking statements. When relying on forward-looking statements to make decisions, investors and others should carefully consider the foregoing factors and other uncertainties and should not place undue reliance on such forward-looking statements. The Company does not undertake to update any forward-looking statements, except as may be required by applicable securities laws. For such forward-looking statements, we claim the safe harbour for forward-looking statements within the meaning of the Private Securities Legislation Reform Act of 1995.
